No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Description

UG-09-398-239-5

Sequence 5, Application US/09398239

Patent No. 6407216

GENERAL INFORMATION:
APPLICANT: Bosanthal, Arnon
APPLICANT: Stone, Domna
TITLE REFERENCE: P105001

CURRENT APPLICATION Vertebrate Smoothened Proteins
FILE REPERENCE: P105001

CURRENT FILING DATE: 1999-09-20

EARLIER APPLICATION NUMBER: US/09/398,239

CURRENT FILING DATE: 1996-09-20

EARLIER FILING DATE: 1996-09-30

NUMBER OF SEQ ID NOS: 5

SEQ ID NO 5

Sequence 67552, Application US/10425114

Publication No. US20040034888A1

GENERAL INFORMATION:
APPLICANT: Liu, Jingdong
APPLICANT: Zhou, Yihua
APPLICANT: Screen, Screen, Screen, Screen, Screen, Screen, Screen, Story E
APPLICANT: Cao, Yongwei
APPLICANT: Tabaska, Jack E
APPLICANT: Tabaska, Jack E
APPLICANT: Tabaska, Jack E
APPLICANT: Paparicanton: Nucleic Acid Molecules and Other Molecules Associated With
TILE OF INVENTION: Plants and Uses Thereof for Plant Improvement
FILE REFERENCE: 38-21(53313)B

CURRENT APPLICATION NUMBER: US/10/425,114

CURRENT FILING DATE: 2003-04-28

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 49103, Application US/09270767

Patent No. 6703491

GENERAL INFORMATION:

APPLICANT: Homburger et al.

TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster;

FILE REFERENCE: File Reference: 7326-094

CURRENT APPLICATION NUMBER: US/09/270,767

CURRENT FILING DATE: 1999-03-17

NUMBER OF SEQ ID NOS: 62217

SOFTWARE: Patentin Ver. 2.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 34186, Application US/09270767

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  원
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 14297, Application US/09489039A
Sequence 14297, Application US/09489039A
Patent No. 6610836
GENERAL INFORMATION:
APPLICANT: Gary Breton et, al
TILLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO KLEBSIELLA
TILLE OF INVENTION: PREDMONTAE FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 2709.2004001
CURRENT FILING DATE: 2000-01-27
PRIOR PLILOR DATE: 1999-01-29
RIOR APPLICATION NUMBER: US 60/117,747
PRIOR PLILNG DATE: 1999-01-29
NUMBER OF SEQ ID NOS: 14342
SEQ ID NO 14297
LENGTH: 63
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 3849, Application US/09134000C

Sequence 15218, Application US/09248796A
Patent No. 6747137
GENERAL INFORMATION:
FAPELICANT: Keith Weinstock et al
TITLE OF INVENTION: NUCLBIC ACID AND AMINO ACID SEQUENCES RELATING TO CANDIDA ALBICA
TITLE OF INVENTION: POR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 107196.1132
CURRENT APPLICATION NUMBER: US/09/248,796A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

J. Mol. Evol. 47:190-199(1998).
-!- CATALTIA GATIVITY: D-GLYCeraldehyde 3-phosphate + phosphate + NAD(+) = 3-phospho-0-glyceroyl phosphate + NADH.
-!- PATHWAY: Second phase of glycolysis; first step.
-!- STBUTIT: Homotetramer (By similarity).
-!- SUBCELLIULAR LOCATION: Cytoplasmic (By similarity).
-!- SIMILARITY: Belongs to the glyceraldehyde-3-phosphate dehydogenase family.

Title: Perfect score:

Run on:

Sequence:

Scoring table:

Searched:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. 6583275
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Lynn A Doucette-Stamm and David Bush
APPLICANT: Lynn A Doucette-Stamm and David Bush
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO
TITLE OF INVENTION: BUTEROCOCCUS FABCIUM FOR DIAGNOSTICS AND THERAPEUTICS
                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ABPLICANT: LYND DOUGETE-Stamm et al ADRIGO ACID SEQUENCES RELATING TO TITLE OF INVENTION: WUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO TITLE OF INVENTION: WUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO TITLE OF INVENTION: ENTERCOCOCUS FAECALIS FOR DIAGNOSTICS AND THERAPEUTICS FILE REFRENCE: 032796-032
